

1. Go to <https://startbootstrap.com/template-categories/all/>
Find a theme, click preview & download

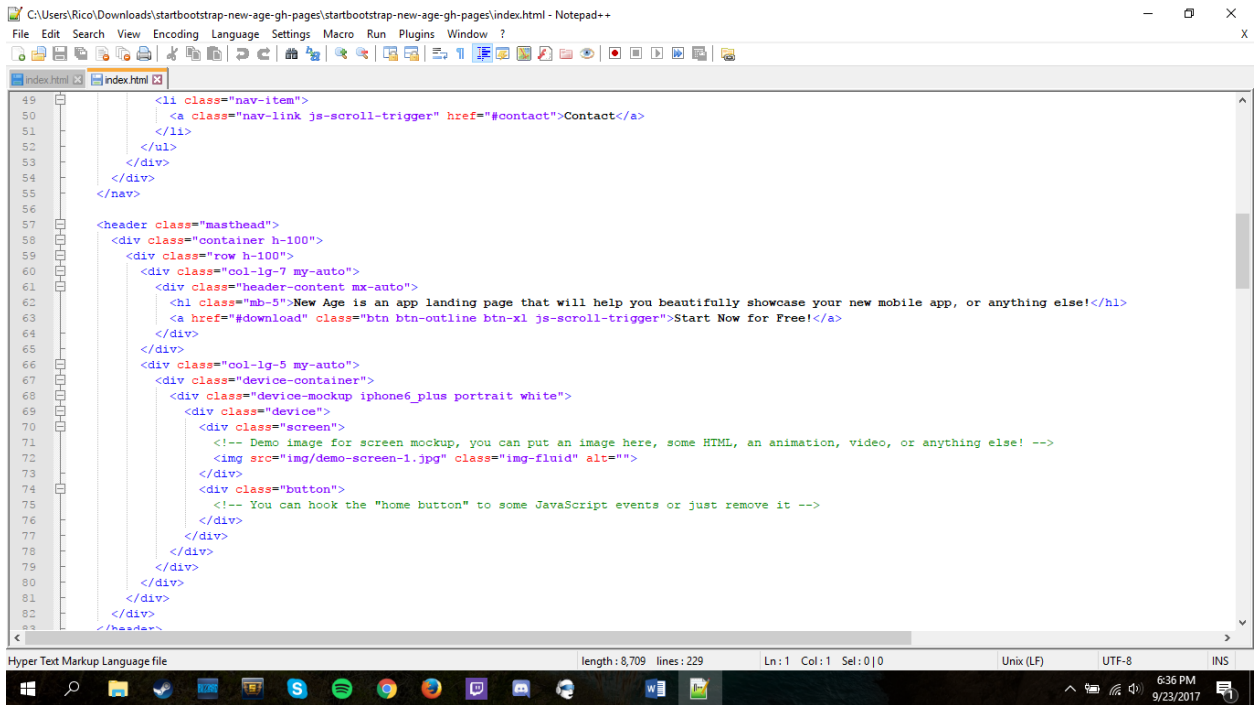

2. Click Download

3. Extract the ZIP file that appears

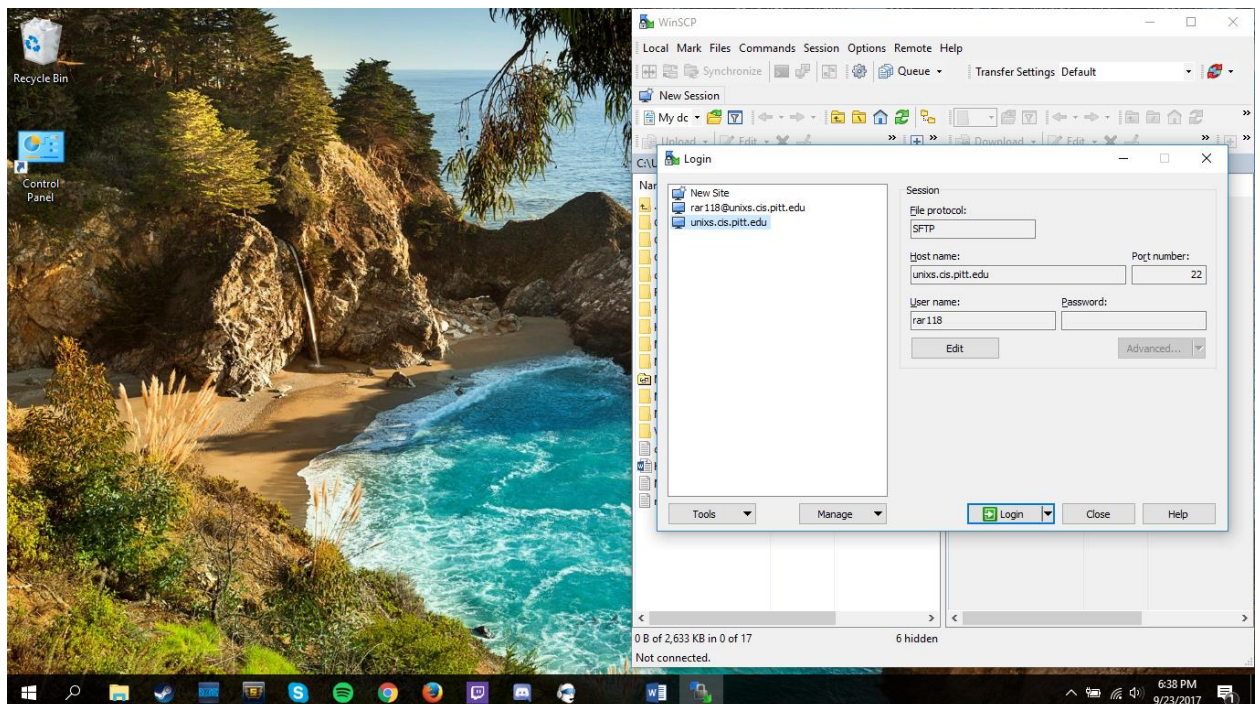

4. Open the extracted folder and edit the index.html with any text editor (notepad, notepad++, VB, etc.)

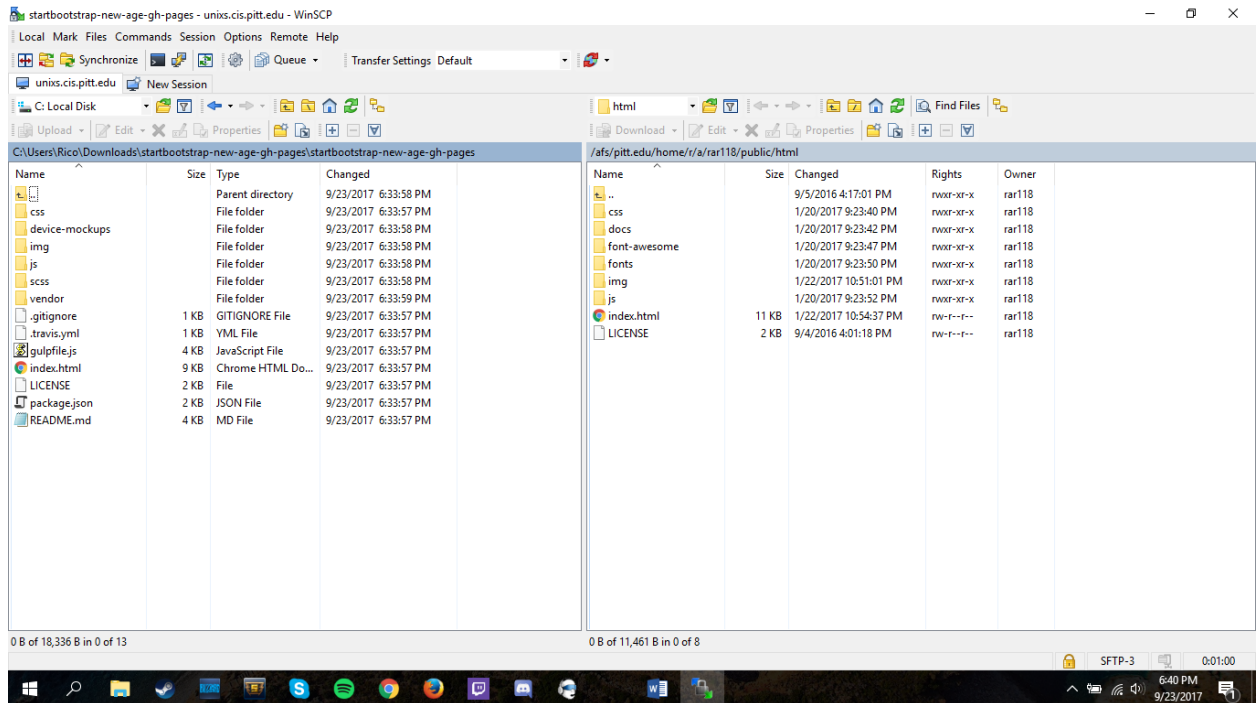

```
49 <li class="nav-item">
50 <a class="nav-link js-scroll-trigger" href="#contact">Contact</a>
51 </li>
52 </ul>
53 </div>
54 </div>
55 </nav>
56
57 <header class="masthead">
58 <div class="container h-100">
59 <div class="row h-100">
60 <div class="col-lg-7 my-auto">
61 <div class="header-content mx-auto">
62 <h1 class="mb-5">New Age is an app landing page that will help you beautifully showcase your new mobile app, or anything else!</h1>
63 <a href="#download" class="btn btn-outline btn-xl js-scroll-trigger">Start Now for Free!</a>
64 </div>
65 </div>
66 <div class="col-lg-5 my-auto">
67 <div class="device-container">
68 <div class="device-mockup iphone6_plus portrait white">
69 <div class="device">
70 <div class="screen">
71 <!-- Demo image for screen mockup, you can put an image here, some HTML, an animation, video, or anything else! -->
72 
73 </div>
74 <div class="button">
75 <!-- You can hook the "home button" to some JavaScript events or just remove it -->
76 </div>
77 </div>
78 </div>
79 </div>
80 </div>
81 </div>
82 </div>
83 </header>
```

5. This is where to edit the actual script – just replace all there filler with your stuff, comment out sections, etc. Save when finished and double-click the index to preview in-browser.

6. When satisfied, open WinSCP. Enter unixs.cis.pitt.edu for host name, pitt username, and click login. Enter pitt password, then click okay two or three times.

7. Navigate to the website file that was downloaded and where you edited the index on the left, and on the right the directory should be `/afs/pitt.edu/(your first initial)/(your second initial)/(your pitt login)/public/html`
Copy ALL the files from the left to the right (mine does not look the same because my current website is not the same as this example I'm using).
8. Close WinSCP. It may take a few minutes to update, but your website will be `pitt.edu/~(your pitt login)`
9. For an example of the script I used or how to add links in text, add a tab image at the top of the webpage, etc., go to `pitt.edu/~rar118` right click and click view page source to view my code
